DETAILED ACTION

Election/Restrictions

1. Claims 1-5 are withdrawn from further consideration pursuant to 37 CFR 1.142 (b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made without traverse in the reply file December 8, 2005.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 6-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 6-7 are rendered indefinite because the language "in a network manner" is unclear.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 5 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Chigusa et al., U.S. Pre Grant Publication 2002/0153854.

Art Unit: 1774

Chigusa discloses a method for producing an image display (network conductor) comprising the steps of forming a thin film on a substrate by applying a sol-gel liquid (see paragraphs 0034-0040); generating fine pores (i.e. microcracks) by drying the sol-gel liquid (see paragraph 0038-0048); and filling said pores with a conductive material to form network conductor (see paragraphs 0040-0050).

Double Patenting

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned

Art Unit: 1774

with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 6-17 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 3-14 of copending Application No. 10/801,577. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications recite a method of producing a network conductor (image display) comprising the steps of forming a thin film on a substrate; generating microcracks in a network manner in said thin film; and filling said microcracks said microcracks with a conductive material to form the network conductor. The present claims do not recite an image display. However, an image display encompasses a network conductor. Therefore, it would have been obvious to one of ordinary skill in the art to recognize that the image display reads on the network conductor of the present invention.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
